## **C THRU SEPARATOR**

### **ANOTHER SATISFIED CUSTOMER**

#### **Benefits of a C Thru Separator**

- **Quick & easy installation – typically 15 to 30 minutes**
- **Removes tramp oil 10 to 15 times faster than a belt / disc / rope skimmer**
- **Extended fluid life**
- **Increased tool life**
- **No consumables**
- **No floor space utilised**
- **Easy to clean**
- **Patented transparent design**

An international manufacturer of valves was experiencing severe problems with tramp oil on various CNC machines whilst using their belt skimmer.

European Filter Solutions Ltd offered them a free trial of a C Thru Separator which only took only 20 minutes to install on a CNC machine of their choice.

A significant improvement in cutting fluid quality was quickly noticed. The tramp oil which had been removed could be clearly seen within the C Thru Separator.

The cutting fluid was monitored over a period of 12 months with the following positive comments reported:

- There is a significant reduction in fluid usage.
- There is no longer any problems with tramp oil as all tramp oil entering the system is being removed constantly by the C Thru Separator.
- The tramp oil which is being removed is now being sold instead of the company having to pay for its removal.
- Payback on investment was estimated at approximately 7 months.
